Compost Sample Collection Instructions

Compost Sample Collection Instructions

1. For a small compost pile, collect a spoonful of compost from 5-10 different spots.
2. For larger compost piles or windrows, gather spoonfuls from 20 different locations. Take samples from various points and depths within the pile, then combine them into a single Ziploc bag to ensure the sample represents the entire pile.
3. Place the combined sample in a large Ziploc bag, making sure not to fill it more than halfway. Seal the bag with the air still inside—do not expel the air, as the oxygen is crucial for maintaining the compost's biological activity.
4. Label the sample bag on the outside using a marker or an attached label. Do not place any labels inside the bag

Mail next day delivery to:
The Soil Source

37 Oxford St
Te Puke, 3119
New Zealand

PLEASE NOTE:

Samples must be sent Monday - Wednesday
